

***PRIVplus* Tips & Tricks**

Adding Additional Workstations to a Networked *PRIVplus* Installation

General –

PRIVplus V7.0 includes a new workstation setup program called PRIVDesktopsetup.exe which is used to setup new workstations. The PRIVDesktopsetup.exe program will be located in the \cbr\priv folder along with your other PRIV related files.

If your PRIVplus application is using a mapped network drive then the new workstation must have the same drive letter mapped to the same server/share/path as the other PRIVplus users.

If you are running a version of PRIVplus prior to v7.0 you can upgrade to V7.0 at any time. You can also download the PRIVDesktopsetup.exe program from our FTP site using the credentials found in Appendix 1 below. If downloading the PRIVDesktopsetup.exe program for use on an earlier version of PRIVplus, be sure and place the downloaded file in the same folder as the PRIV.EXE file in your network PRIVplus folder structure.

The PRIVDesktopsetup.exe program requires administrator privileges on the local PC in order to run. If the user does not have administrator privileges you can use the “Run as Administrator” option when executing the program.

Procedure –

1. Map a network drive on the new workstation (if applicable).
2. From the new workstation, browse to the network drive or UNC path and execute the cbr\priv\PRIVDesktopsetup.exe program file.

Appendix 1 – CBR Associates, Inc. FTP site login credentials

URL: ftp.cbrassoc.com
Username: PRIVplusUpdate
Password: cbrassoc1415

The PRIVDesktopSetup.exe program file is located in the **\Files for earlier versions of PRIVplus** folder.
